Astral Systems

Client Meeting
April 26, 2016

- Showed client what we added to the project
  - Likes the added buttons on the "Active Calls" page (truck left firehouse, on scene, clear scene)
  - Likes the archive page as well
  - "Looks great!"
- The navigation bar is fire engine red! Dr. Rivituso approves.

- Archiving call information, including which firefighters were on which calls and any injuries that were received is very important due to liability issues, like workers compensation
- Need a screen that has
    - Call location
    - Call type
    - Dispatch time
    - Time truck left firehouse
    - Time arrived at the scene
    - Time they are put back in service/time the scene was cleared
    - What firefighters were on a call
    - Field that tells you who was injured at the call
- Can put buttons on the "Active Calls" page to record dispatch time, time truck left firehouse, time truck arrived at scene, time the scene was cleared
- New report page to display all of the bulleted information above
- Use a drop down menu to select the archived calls?
