Client Meeting
February 4th, 2016

Call Information:
- Change "Responders at Scene" to "Information"
- Only one call displayed at a time
- When you select a call from the drop down, the time, type, location, and information appears in the red box
  - The information will dynamically update as call is going on
  - The dispatcher updates this information on the "Enter Call" page/application
  - This will have to be for Sprint 4 - cannot add on more work once the Sprint begins
- The "Assign" page updates every minute - AJAX
- Call Types - have a drop down on the "Enter Call" page/application
  - Structure Fire
  - Hazardous Conditions
  - Vehicle Fire
  - Vehicle Accident

The title for our fire company will be **Loudonville Fire**

SPRINT 3

1. Add more color/uniformity throughout the pages
2. Updating the call information dynamically
    a. How to handle multiple calls at the same time? Create a drop down menu with all of the active calls - can select the call you are currently assigning firefighters to
    b. Call is no longer active when the chief says "all units back in service"
        i. We will mark a call complete when the truck is back at the firehouse & the firefighters and fire truck become available again
    c. Simulate dispatch center
        i. Must be able to enter call information
3. Ability to reset people when the call is over/ability to delete firefighters from the call
    a. Create a **Call Page** that shows the active trucks
        i. Can view firefighters on truck
        ii. Can delete/remove firefighters from truck
        iii. Can end the call ("End Call" button)

Another thing to work on in the future...
- When a call comes in, it would be nice to have a map that shows how to get from the firehouse to the given call
- Can we bring Google Maps into this?

MEETING TIME
Does Thursday night (7:15pm) or Friday morning (9:00am) work better for weekly client meetings?
